Students pursuing a BA degree:

- You are strongly encouraged to take Math 114QR, Quantitative Reasoning, a course that is specifically designed to show students the relevance of mathematics to their lives. It assumes a low level of mathematics background and confidence.
- Another option is to take or transfer in Math 115, College Algebra. This is a good choice if you intend to take Statistics, PreCalculus or Calculus.
- You may also take or transfer in a Statistics course. If you place into and pass (or transfer in) one of the following statistics courses you will be waived from the quantitative reasoning requirement and you will receive math distribution credit.
  - Math 125
  - Sociology 350
  - Sociology 352
  - Psychology 270
  - Economics 205
  - ENVSCI 261
- Students may also meet the Quantitative Reasoning requirement by placing into Pre-Calculus or higher (placement alone demonstrates proficiency) or by showing proficiency through Advanced Placement or CLEP testing. Scores on the mathematics placement test for the purpose of illustrating proficiency must be obtained through completion of the test in the testing center.
