Learn about current topics, methodologies, and best practices that nurses and all Health Care Professionals can use when caring for individuals with a Substance Use Disorder (SUD). Review existing research that will equip HCPs to increase awareness in the following areas: referral mechanisms to treatment, support systems for families, pharmacology, mandated treatment, home detoxification, and Neonatal Abstinence Syndrome.

- Identify criteria required for referral to treatment programs for SUD
- Describe existing support systems for families
- Review pharmacological support to Recovery utilizing Medication Assisted Treatment
- Examine mandated treatment and utilization of the Section 35 process
- Identify the major issues when caring for infants with Neonatal Abstinence Syndrome
- Explore and discuss home detoxification and withdrawal protocols
