Kendall Sustainable Infrastructure (KSI) manages investments into commercially viable renewable energy projects (such as wind and solar) in the US through private equity funds. The focus is on acquisition of late stage development projects with long-term power contracts in place (PPA) to sell the power. The objective is long-term ownership. We are thought leaders, fundamental investors, and focused on financing the new energy economy through the deployment of smart capital.

The ideal person will have financial modeling capability, possess a functional understanding of renewable energy projects and markets, and be able to demonstrate extreme attention to detail in due diligence. This person will work directly with the Managing Directors of the firm and gain direct exposure to transactions.

**Level:** Analyst to Manger  
**Status:** PT to FT - Consultant

**Purpose**
- Support senior leadership on acquisition and financing transactions and conduct regular asset management activities.

**Essential Functions**
- **Financial Modeling - DCF analysis**
- Manage the execution of project due diligence, including:
  - Work with internal and external functional experts (i.e. construction, O&M, legal, tax, accounting, meteorology, etc.) to identify and analyze potential returns and risks from potential projects and ensure information from all required sources is incorporated into project analysis, presentations, and decision making models.
  - Review, expand and maintain long-term financial models for projects in various development phases.
  - Ensure that all commercial and financial terms are accurately evaluated and captured.
- Assist in oversight and review of project development activities performed by partners: including but not limited to land rights, energy analysis, interconnection rights, permits, power sales contracts.
- Coordinate project development activities with other departments to ensure thorough analysis, proper structuring, and timely progression of development stage projects.
- Assist with development of presentation material to third parties, including for financing sources.
- Where applicable participate, develop, structure and negotiate transactions terms with other parties of the transaction, organize and perform transaction due diligence, and close transactions.
- Prepare reports including but not limited to financial and performance related.
- Track regulatory and legislative generation-related initiatives.
- Prepare presentations for senior management, and make recommendations to Managing Committee regarding investment proposals.
Qualifications / Expectations

• 1 – 3 years of relevant direct experience in the field of project finance, renewable energy development or financial analysis.
• Demonstrated experience using strong analytical and problem solving skills.
• Demonstrated experience analyzing operational and financial data for the purpose of drawing conclusions and making recommendations to management.
• Demonstrated ability to handle multiple priorities concurrently and accomplish work in a dynamic and changing environment.
• Demonstrated ability to utilize strong interpersonal skills to interact and communicate with all levels of personnel in a professional and tactful manner.
• Demonstrated ability to work independently and exercise initiative to accomplish assigned responsibilities and anticipate/solve problems with minimal supervision.
• Demonstrated ability to work well in a team environment and support other team members.
• Knowledge of financial analysis principles and techniques.
• Demonstrated proficiency with PC applications, including Excel, Word, and Power Point.
• Demonstrated experience in conducting research.
• Moderate-to-extensive travel may be required.

Preferences

• Undergraduate degree in Engineering, Business, Finance, or related field.
• Two or more full-time equivalent years of experience in a technical- or business-related field performing tasks of an analytic and/or project management nature.
• Experience in the distributed solar generation market
• Electric generation industry knowledge and experience.
• Experience with Tax, Tax Structures and Tax Equity a plus
