No, it isn’t just you. Gender harassment in particular, the “put downs” of sexual harassment, are rarely recognized as creating a negative workplace for women and gender minorities. Dr. Clancy will explain how gender harassment causes people to question the validity of their experience, their scientific identity, and their worth, and how people are targeted for intersecting forms of harassment depending on their other identities (e.g., race, sexuality). She will share the ways in which science climates can improve to benefits all scientists and science itself.

Dr. Kathryn Clancy is Associate Professor in the Department of Anthropology, Director, of the 21st Century Scientists Initiative, and Co-Director of the Laboratory for Evolutionary Endocrinology at the University of Illinois, Urbana-Champaign.
