Problem: You can no longer run University applications after upgrading Java.

Solution: Newer versions of Java require additional settings to run some applications. You can update these settings via the Java Control Panel.

<table>
<thead>
<tr>
<th>Platform</th>
<th>Instructions</th>
</tr>
</thead>
</table>
| Windows 7, Vista  | - Click on the **Start** button and then click on the **Control Panel** option.  
                        - In the Control Panel Search enter **Java Control Panel**.               
                        - Click on the Java icon to open the Java Control Panel.               |
| Mac OS X 10.7.3 and above | - Click on **Apple** icon on upper left of screen.                           
                                   - Go to **System Preferences**                                            
                                   - Click on the Java icon to access the Java Control Panel.              |
| Windows XP        | - Click on the **Start** button and then click on the **Control Panel** option.  
                        - Double click on the Java icon to open the Java Control Panel.       |

In the Java Control Panel window, click on the **Advanced** tab.

**Uncheck:**
- Use SSL 2.0
- Use SSL 3.0
- Use TLS 1.1
- Use TLS 1.2

**Check:**
- Use TLS 1.0

Click **Apply**, then **OK**.

Congratulations!
