Check the Internet connections. You should see **UMB-Staff-Fac** among the available connections. Click on "**Open Network and Sharing Center**".

Click on "**Manage Wireless Networks**".
Click on **Add**

Click on "**Manually create a network profile**".
Enter the information as shown below. Make sure that none of the boxes are checked. Click **Next**.

Click on "**Change connection settings**".

Successfully added UMB-Saff-Fac

- Change connection settings
  - Open the connection properties so that I can change the settings.
Remove the check where it says "Connect automatically when this network is in range". Click on the Security tab.

Remove the check where it says "Remember my credentials for this connection each time I'm logged in". Click the button that says Advanced settings.

On the 802.1x tab, check "Specify authentication mode". Select "User authentication". Click OK.

Click on Settings.
Remove the check where it says "Validate server certificate". Click on "Configure".

Remove the check where it says "Automatically use my Windows logon name and password (and domain if any)". Click OK.

Click OK.

Click OK.

Click Close.

Click on UMB-Staff-Fac. Remove the check where it says "Connect automatically". Click on "Connect".

Enter your UMB email username and password (without the domain) and click OK.
Once connected, you will get the following prompt. Select **Public network**

Click **Close**.

You may start your browser or other application that requires an Internet connection.
