Construction Impacts

Construction of New Entrance to Parking Lot D

- On Tuesday, July 31, 2018 the Utility Corridor and Roadway Relocation (UCRR) Project began the last phase of constructing the new entrance to Lot D.

- The first step is constructing a temporary gravel road adjacent to the existing entrance to Lot D. This will take approximately one week and should have limited impact on operations of the lot.

- Once the temporary entrance road is built a toll booth will be relocated between the temporary road and the existing entrance roadway. Pedestrian access will also be shifted at the same time.

- Following this shift only two lanes (one inbound and one outbound) will be in service – this condition is expected to in place for approximately three weeks (roughly from Monday, August 6, 2018 until Friday, August 24, 2018).

- During this three-week period, please expect additional delays exiting the lot as only one exit will be in place.

- Construction of the new entrance will also result in the temporary loss of approximately 32 parking spaces

- We apologize for the inconvenience and appreciate your patience
