

FACILITIES CONSTRUCTION NOTICE

What	Quinn Building Electrical Shutdown
When	Friday 02-October-2026 / 6:00 PM to 11:00 PM

Work Notice Description

As part of the **Bright Beacon Solar Project** for the Quinn Building, an electrical shutdown will take place on **Friday, 10/2/26**. The photovoltaic (PV) panel system is currently being installed on the Quinn Building roof, and the contractor, **Solect**, must temporarily shut down the building's electrical supply to complete the connection of the PV system.

The electrical shutdown is scheduled to begin at 6:00 PM on Friday 10/2/26 and is expected to last approximately 4 to 5 hours.

Please note the Quinn emergency generator will operate during this period, providing power to essential life safety systems, including exit lighting, elevators, and all previously designated emergency power outlets.

What to Expect

During the building shutdown:

- Normal power will not be ON; occupants should plan to turn off their computers and other equipment when leaving on the day of the scheduled shutdown for their building.
- Emergency power will support those outlets already on emergency circuits.
- Returning to work the following working day will require that computers and other equipment be restarted by pressing the power button.
- Food items within refrigerators that cannot last 8 hours should be removed.
